

# POWDER COATING TIP SHEET

## Cleaning impact fusion from hoses

**Problem.** Sometimes impact fusion in powder coating application equipment hoses can be difficult to clean out.

**Solution.** We've been coating for 20-plus years and found the simplest thing to use for cleaning impact fusion from powder coating equipment hoses is basic tube-shaped earplugs. Push

them into the hose, and force through with air pressure. It only takes about two or three passes to clean the hose and is very cheap.
