

POWDER COATING

March 2017

Visit our website at www.pcoating.com.

The use of powder coatings in automotive applications has become more widespread as owners seek more durable and long-lasting primers, base coats, top coats, and clear coats for their projects. Available in countless colors, shades, and textures, powder coatings not only provide an enviable decorative finish, but also a protective finish that offers corrosion and chemical resistance. Powder coatings can be used to finish almost all of an automobile's exterior parts as well as underhood components, including frames, wheels, door handles, decorative trims, bumpers, and much more.
