Cover photo features a metal pretreatment operation applying PlafORIZATION One-Step Organic pretreatment. The part is flow-coated for 1 minute at ambient temperature, after which it is dripped off and dried and is ready to paint. PlafORIZATION provides flash rust protection before painting and high adhesion and corrosion resistance with powder and liquid topcoats. The efficient, cost-effective process is environmentally friendly. It uses no heat or water, is not rinsed, and creates no sludge or other liquid or solid waste to treat or dispose of.
