

SHOW PREVIEW

parts2clean will clean up in Germany

Touted as the cleanest environment for great deals, parts2clean is the global meeting place for users and suppliers of industrial parts and surface cleaning solutions.

Alicia Tyznik *Editor*

Wherever industrial parts are manufactured or processed, parts cleaning technology is critical for the successful outcome of downstream manufacturing processes and for the quality of the finished product. High standards of cleanliness are required, involving the removal of particulate residues and surface films—and the standards are getting more demanding all the time.

In order to remain competitive, companies around the world are under pressure to clean their parts to the required standards at the lowest possible cost. Quality needs perfection, and that's what the organizers of parts2clean 2018 aim to give attendees at this year's show. The Leading International Trade Fair for Industrial Parts and Surface Cleaning will take place October 23-25 at the Stuttgart Exhibition Center in Germany.

Currently on course for another successful show, more than 230 exhibitors will display their industrial parts and surface cleaning solutions to upwards of 4,900 visitors. The wide range of exhibits will address every link of the process chain, including plants, installations, processes, process media, and conditioning for the

degreasing, cleaning, and pretreatment of parts and components, handling and process automation, washer baskets and pallets, cleanroom technology, quality assurance, test methods and analytical procedures for cleanliness inspection, corrosion protection, preservation and packaging, and contract cleaning. Other special interests that will be covered include deburring and cleaning in electronics production and medical technology, as well as ultrafine cleaning and quality control in cleanroom environments.

The bilingual Industry Forum will offer 35 simultaneously translated lectures and presentations in English and German on every conceivable aspect of industrial parts and surface cleaning. Speakers from the industry, science, and research fields will present new developments, sketch out pathways to process and cost optimization and quality control, and report on best-practice applications.

Guided tours in both English and German will also be offered on all three days of the show. Taking in specially selected exhibitor stands, the tours will give visitors the opportunity to get informed about topics of partic-

ular interest to them regarding every single step of the industrial parts and surface cleaning process. **PC**

More info

Location. parts2clean 2018 will take place at the Exhibition Grounds Stuttgart, Halls 3 and 5, Messeplazza/Flughafentrabe, 70629 Stuttgart, Germany.

Travel. The trade fair center is located between the airport and the motorway, making it easy to reach from any location. There are direct urban railway connections to Stuttgart Central Station on lines S2 and S3. The station is centrally connected to 13 European cities.

Show hours. 9:00 a.m. to 5:00 p.m. daily.

Registration. Advance registration and ticket purchases are available on the show's website.

Contact info. Organized by Deutsche Messe. Contact Maren Ludwig at +011-49-511-89-31124. The official show website is www.parts2clean.com.
